

Alexander Ross

Project leader, Developer

Hard core Ruby and Javascript developer that loves to make the customer and end user happy.

Skills

- Ruby on Rails (guru)
- Angular JS (guru)
- JavaScript (guru)
- Web development (guru)
- Ruby (guru)
- SCSS (expert)
- CSS (expert)
- PHP (expert)
- HTML (expert)
- jQuery (expert)
- iOS development (expert)
- PostgreSQL (good)
- Project management (good)
- Swift (good)
- RubyMotion (good)
- MySQL (good)

Experience

Web Developer at Standout AB

2013 -

Co-owner and full stack web developer focusing on solutions to add value to clients business. Applications I write will mostly be in Ruby or JavaScript.

Projects

Company register for Municipalities

When i got involved in this project it was running ruby 1.8 and rails 2 on production. I've been a part of the upgrade to ruby 1.9 and rails 3 and also implemented a new hierarchy called regions. Municipalities can now collaborate and have a shared registry list under one region.

ExtraBrain

When I first got involved in this project it was a regular Ruby on Rails application with a bit jQuery code in the front end. We have since that day refactored a lot of the Ruby code in the backend and

added a lot of features to make projekt planning, task managment and invoicing much easier. The front end has been rewritten to an AngularJS app which talks to the backend with mostly JSON.

KUB (Kvalitetssäkrad utbildning)

KUB have been developed under a good and close collaboration with the client to provide apprentices the best opportunity for a quality education.

I have led the project forward as a full stack developer and taken care of server management, back end and front end.

The front end is written with AngularJS with talks to the Ruby on Rails backend through JSON.

Socket

Socket is a portal for internet casinos. It's main purpose is to combine multiple game providers and other web services in one single hub. This makes it easier for the client to integrate the services they like in there gaming platform both on the web or in an mobile or desktop app.
